

$$37 \times 62 = 2,294$$

We can use the calculation above to derive the answers to all of the questions below:

$$37 \div 10 \times 62$$

$$22.94 \div 62$$

$$3.7 \times 6.2$$

$$2,294 \div 0.37$$

$$3.7 \times \frac{62}{100}$$

$$\frac{2294}{37} \div \frac{62}{100}$$
