## Represent fractions on number lines

I)

What fraction is each arrow pointing to?

(2)

Aisha says that the arrow is pointing to $\frac{1}{3}$

a) Aisha is not correct. Why do you think she might have thought that? Discuss with a partner.
b) What fraction is the arrow pointing to? $\square$

3 Draw an arrow from each fraction to its correct position on the number line.

```
\frac{1}{7}
```

$\frac{3}{7}$
$\frac{7}{7}$
4)

Here is a number line from 0 to 1

Label the point $X$ at $\frac{2}{5}$

Explain how you decided where the point X would be.Scott's school is 1 km from his house.
The coffee shop is $\frac{1}{2} \mathrm{~km}$ from Scott's house.
The factory is $\frac{2}{7} \mathrm{~km}$ from Scott's house.

Indicate on the number line where the coffee shop and factory are.Are these arrows pointing to the same fraction? $\qquad$ -

Explain your answer.
$\qquad$
$\qquad$
$\qquad$

7
a) How far along the number line is the point marked?

b) Mark the point $\frac{8}{9}$ of the way along the number line.
The number line shows both fifths and tenths.

a) Draw arrows to show $\frac{2}{5}$ and $\frac{7}{10}$
b) Use the number line to complete:

$$
\frac{6}{10}=\frac{\square}{5}
$$

c) Use < or > to make the statements correct.

d) Compare methods with a partner.

(9)
a) How can you mark eighths on this number line?

Explain your method to a partner.
b) Using the number line, show that $\frac{3}{8}$ is less than $\frac{7}{12}$
