

# Understand and use representations of directed numbers

1  $(-1) = -1$  and  $(1) = 1$

What is the total value of each set of counters?

a)  $(1) (1) = 2$

$(-1) (-1) = -2$

b)  $(1) (1) (1) (1) = 4$

$(-1) (-1) (-1) (-1) = -4$

c)  $(1) (1) (1) (1) (1) (1) (1) = 7$

$(-1) (-1) (-1) (-1) (-1) (-1) (-1) = -7$

d)  $(1) (1) (1) (1) (1) (1) (1) (1) (1) (1) (1) (1) = 11$

$(-1) (-1) (-1) (-1) (-1) (-1) (-1) (-1) (-1) (-1) (-1) (-1) = -11$

2 Circle the number that is closest to zero.

2      -3      -1      4

Explain your answer.

It is only one away from zero.

3 Here is a number line.  
Mo has marked the number 17

a) Mark the number -17 on the number line.

b) How do you know where -17 is?

It is the same distance from zero as 17 but the opposite direction.

4 Write the missing numbers.

- 5 What numbers are the arrows pointing to?  
Label them on the number lines.

Discuss with a partner how you worked out the numbers.

- 6 What is each number line going up in?  
Give your answer as a fraction.

- 7 Estimate the number the arrow is pointing to on the number line.

- 8 What temperatures are shown on the thermometers?

Compare answers with a partner. Did you get the same?

- 9 Complete these linear sequences.
